MARCVENTURES BAUXITE PROJECT

Marcventures Bauxite Project Has 73.2 Million Metric Tons Aluminum Ore

In a filing to the PSE, listed company Marcventures disclosed that their Bauxite Mining Project in 6 municipalities of Western Samar contains 73.2 Million Wet Metric Tons (WMT) of Measured and Indicated Resources of Bauxite Aluminum Ore which could last for about 20 years mine life at 4.0 Million WMT yearly.

Bauxite is the raw material for Aluminum which has been enjoying stable prices and is projected to have long term rising demand. In fact, supply deficits of bauxite ore are expected due to increasing use of aluminum for electric cars and other transportation equipment, cladding for electric batteries, aerospace, construction and even defense applications. During the commodity slump, aluminum prices remained stable and in fact, improved over the years.

The properties which contained the bauxite ores were obtained when Marcventures merged with Asia Pilot Mining Philippines Corporation resulting to Marcventures' acquisition of One Hundred Percent (100.0%) of the outstanding shares of Alumina Mining Philippines, Inc. and Bauxite Resources, Inc. who are the owners of the only two (2) Bauxite mines in the country under MPSA 179-2002-VIII (SBMR) and MPSA 180-2002-VIII (SBMR), respectively, in the Municipalities of Motiong, Paranas, Gandara, San Jose de Buan, San Jorge and Matuguinao located about 25 to 35 kilometers northeast of Catbalogan City in the Province of Samar.

The ore estimates arose out of an SRK-JORC Compliant Report which was subsequently validated by a Philippine Mineral Reporting Code (PMRC) Report confirming the estimated resources. Indicating even larger potential of the project is the additional Inferred tonnage of 45.7 Million WMT.

Marcventures is very optimistic of the project given the possibility of high margins and sustained long term demand for aluminum.
